CARBON REDUCTION PLAN GUIDANCE

Notes for Completion

Where an In-Scope Organisation has determined that the measure applies to the procurement, suppliers wishing to bid for that contract are required at the selection stage to submit a Carbon Reduction Plan which details their organisational carbon footprint and confirms their commitment to achieving Net Zero by 2050.

Carbon Reduction Plans are to be completed by the bidding supplier¹ and must meet the reporting requirements set out in supporting guidance, and include the supplier's current carbon footprint and its commitment to reducing emissions to achieve Net Zero emissions by 2050.

The CRP should be specific to the bidding entity, or, provided certain criteria are met, may cover the bidding entity and its parent organisation. In order to ensure the CRP remains relevant, a Carbon Reduction Plan covering the bidding entity and its parent organisation is only permissible where the detailed requirements of the CRP are met in full, as set out in the Technical Standard² and Guidance³, and all of the following criteria are met:

- The bidding entity is wholly owned by the parent;
- The commitment to achieving net zero by 2050 for UK operations is set out in the CRP for the parent and is supported and adopted by the bidding entity, demonstrated by the inclusion in the CRP of a statement that this will apply to the bidding entity;
- The environmental measures set out are stated to be able to be applied by the bidding entity when performing the relevant contract; and
- The CRP is published on the bidding entity's website.

Bidding entities must take steps to ensure they have their own CRP as soon as reasonably practicable and should note that the ability to rely on a parent organisation's Carbon Reduction Plan may only be a temporary measure under this selection criterion.

The Carbon Reduction Plan should be updated regularly (at least annually) and published and clearly signposted on the supplier's UK website. It should be approved by a director (or equivalent senior leadership) within the supplier's organisation to demonstrate a clear commitment to emissions reduction at the highest level. Suppliers may wish to adopt the key objectives of the Carbon Reduction Plan within their strategic plans.

A template for the Carbon Reduction Plan is set out below. Please complete and publish your Carbon Reduction Plan in accordance with the reporting standard published alongside this PPN.

¹Bidding supplier or 'bidding entity' means the organisation with whom the contracting authority will enter into a contract if it is successful.

Carbon Reduction Plan Template

Supplier name: Rosemont Pharmaceuticals Limited

Publication date: tbc

Commitment to achieving Net Zero

Rosemont Pharmaceuticals Ltd is committed to achieving Net Zero emissions by 2030.

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline Year: 2020	
Additional Details relating to the Baseline Emissions calculations.	
The baseline year for the emissions report is 2020, during which the total greenhouse gas (GHG) emissions amounted to 989 tCO ₂ e. This total is comprised of 261 tCO ₂ e from Scope 1 emissions and 425 tCO ₂ e from Scope 2 emissions. These emissions have been calculated in line with the 'GHG Reporting Protocol – Corporate Standard' and the HM Government's 'Environmental Reporting Guidelines including streamlined energy and carbon reporting guidance' issued in March 2019. The 2020 UK Government GHG reporting conversion factors were used to ensure consistency and accuracy in the calculations. Notably, Scope 3 emissions were not measured or reported for the baseline year.	
Baseline year emissions:	
EMISSIONS	TOTAL (tCO₂e)
Scope 1	261
Scope 2	425
Scope 3 (Included Sources)	0
Total Emissions	686

Current Emissions Reporting

Reporting Year: 2023	
EMISSIONS	TOTAL (tCO ₂ e)
Scope 1	172
Scope 2	493
Scope 3 (Included Sources)	4
Total Emissions	669

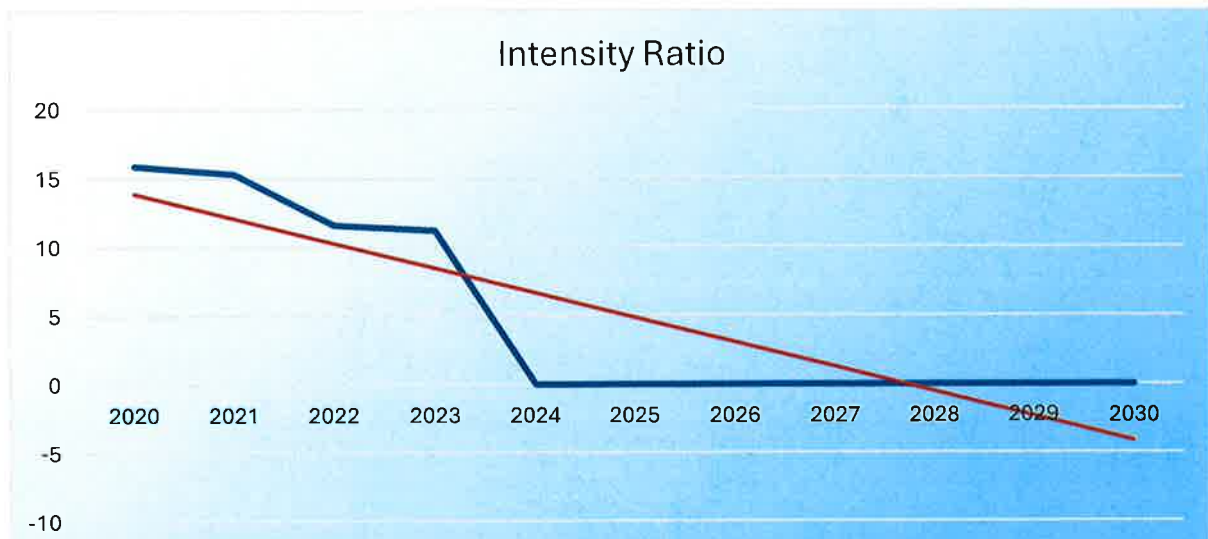

Emissions reduction targets

Rosemont Pharmaceuticals projects a significant reduction in carbon emissions over the next five years, with an expected decrease to below 150 tCO₂e by the year 2029. This represents a substantial reduction of approximately 77% from the 2020 baseline of 989 tCO₂e. This ambitious target reflects the company's commitment to environmental sustainability and its dedication to reducing its carbon footprint in alignment with global climate goals.

Rosemont currently employs an intensity ratio as the primary metric for measuring and tracking its progress in reducing carbon emissions. The intensity ratio, which expresses emissions relative to revenue, allows for a more accurate and comparable assessment of performance over time, especially as the organisation scales or undergoes operational changes. By normalising emissions data, the intensity ratio provides a clear view of the company's efficiency improvements and carbon reduction achievements.

Carbon Reduction

Carbon Reduction Projects

Completed Carbon Reduction Initiatives

The progress towards the emission reduction target is illustrated in the graph above, which depicts a steady decline in emissions intensity over the projected period. This decline reflects the cumulative impact of various sustainability initiatives, such as increased energy efficiency, the transition to renewable energy sources, and the implementation of carbon reduction technologies. The graph highlights key milestones in the company's journey, demonstrating a clear trajectory towards achieving the 2030 net zero target.

To reach the projected 150 tCO₂e by 2029, the company is implementing several strategic initiatives. These include:

Optimising energy use across all operations, including the adoption of advanced energy management systems and upgrading to energy-efficient equipment.

Transitioning from fossil fuels to renewable energy sources to reduce Scope 2 emissions.

Introducing process innovations and technologies that reduce direct emissions (Scope 1), such as electrification of the company's fleet and enhancing process efficiencies.

Educating and involving employees in carbon reduction efforts to foster a culture of sustainability and continuous improvement.

Collaborating with suppliers to reduce upstream emissions and improve the overall sustainability of the supply chain.

The company is committed to transparency in its environmental reporting. Regular monitoring of emissions and intensity ratios will ensure that progress is tracked accurately and that the company remains on course to meet its 2030 net zero target. Any deviations from the projected path will be addressed promptly with corrective actions to maintain momentum.

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard⁴ and uses the appropriate Government emission conversion factors for greenhouse gas company reporting⁵.

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard⁶.
